Nicola Maria Grande

Shaping and Cleaning the Root Canals

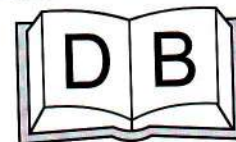

Table of contents

Chapter 1

Introduction to chemo-mechanical shaping of the endodontic system 1

The chemo-mechanical preparation phase in endodontic treatment.....	1
Objectives of root canal shaping.....	6

Chapter 2

Basic principles of chemo-mechanical shaping of the endodontic system 11

Evolution of the principles of chemo-mechanical shaping	11
---	----

Chapter 3

Metallurgy of endodontic instruments, evolution and innovation in the production..... 21

Production and features of stainless-steel endodontic instruments	21
Production and characteristics of nickel-titanium endodontic instruments	28
Background	28
General features of NiTi	28
Principles of NiTi alloy metallurgy	28
The NiTi alloy: from metallurgy to clinical practice	32
Evolution of mechanical Ni-Ti preparation systems	37
Background	37
Evolution to reduce the risk for fatigue fracture	38
Evolution to reduce the risk for torsional fracture	40
The reciprocating movement in endodontics	42

Chapter 4

Scouting, glide path and pre-flaring..... 65

Background.....	65
Definitions	65

Clinical strategies for canal scouting and glide path preparation	73
Easily negotiated canals	77
Difficult to negotiate canals	77

Irrigants and lubricants in the initial phases of the treatment.....	96
--	----

Chapter 5

“Basic” preparation of the root canal 99

Background.....	99
Objectives of the “basic” preparation of the root canal	99
New trends in root canal shaping.....	104
Techniques and instruments for basic preparation of the root canal.....	112
Mechanical preparation of anatomical irregularities in the coronal and middle third	117

Chapter 6

Apical preparation and finishing 131

Background.....	131
Approach to the apex	131
The anatomical bases of the apical third.....	133
Techniques to estimate the ideal dimension of apical preparation	135
Influence of apical preparation on canal debridement and cleaning	136
Clinical strategies for apical preparation	139
Visual gauging	139
Special cases	141

Chapter 7

Cleaning of the root canal system..... 151

Background.....	151
Basic root canal irrigation protocol.....	152
Sodium hypochlorite (NaOCl)	154
Ultrasonic activation of sodium hypochlorite	155
Alternative irrigant activation techniques.....	159
Ethylenediaminetetraacetic acid (EDTA)	163
All-in-one irrigants for continuous chelation	164
Additional disinfection systems	164
Chlorhexidine (CHX)	164
Light-activated disinfection.....	165
Laser.....	166
Ozone.....	166
Use of alternative antibacterial systems.....	166
Cleaning techniques without preparation.....	167

Subject Index	173
